Stick to sides of head once hair has been attached / head assembled

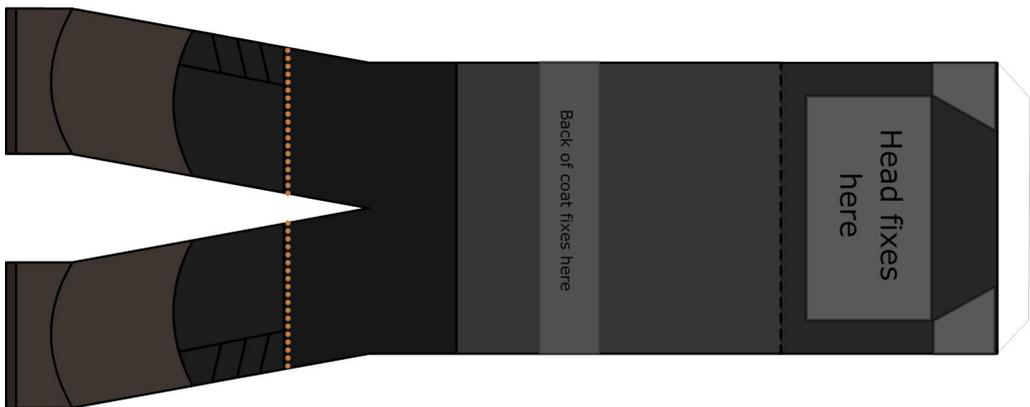

Build back of head before adding face and hair

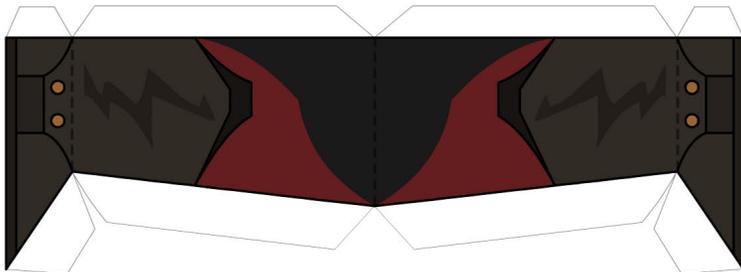

Begin work with the back of the body. Add the left and right sides and then add the inside of the legs. Once the whole back and sides have been built you can add the front to the body.

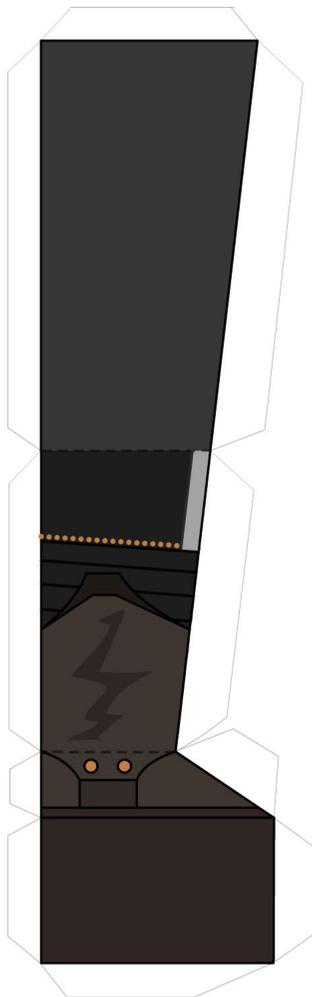

Begin with the front of the legs then add the front of the chest. You will notice the front of the shirt sticks out over the side of the body, curl these around the body so that the ends can fix over the grey rectangles on the sides of the body, giving the front of the shirt a 3D effect.

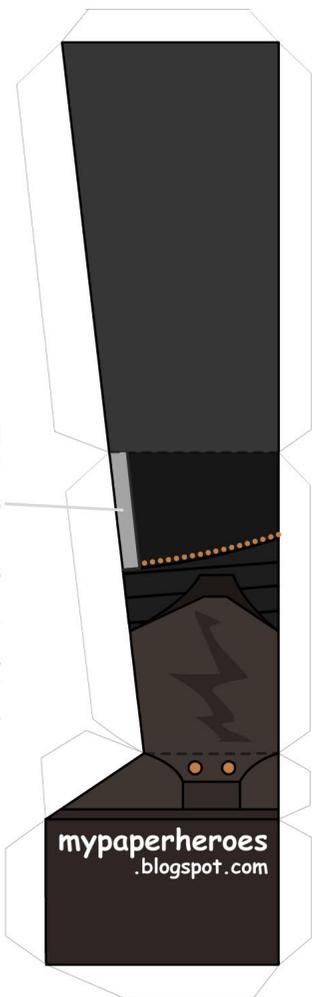

Inside of legs

Right side of body

Left side of body

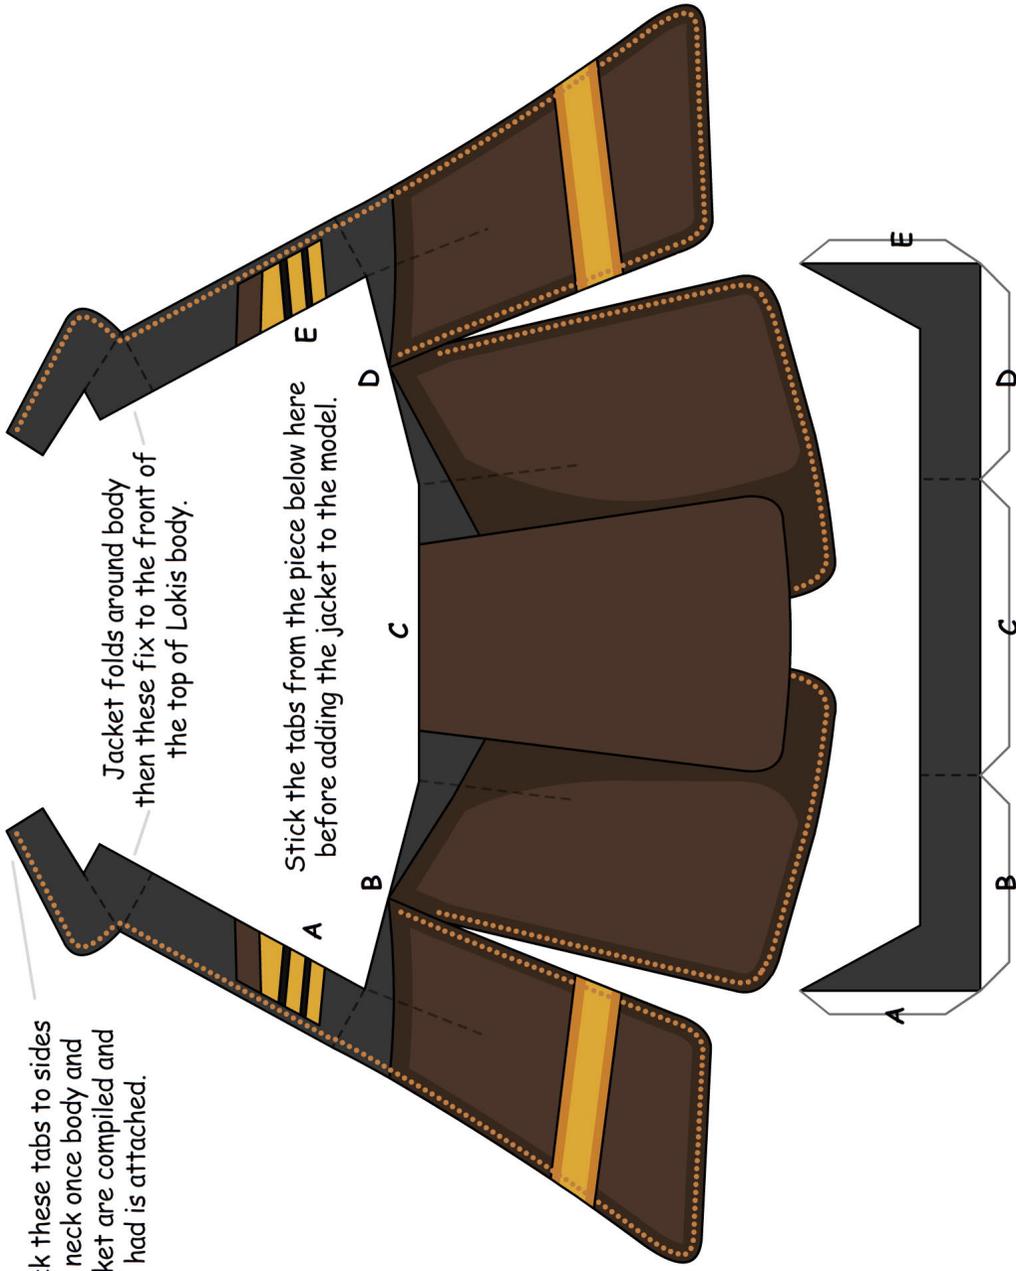

Tabs from front of body  
fix on to these.

Stick these tabs to sides of neck once body and jacket are compiled and had is attached.

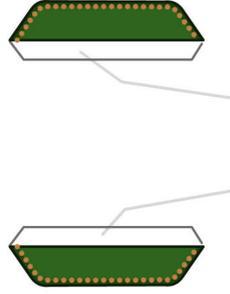

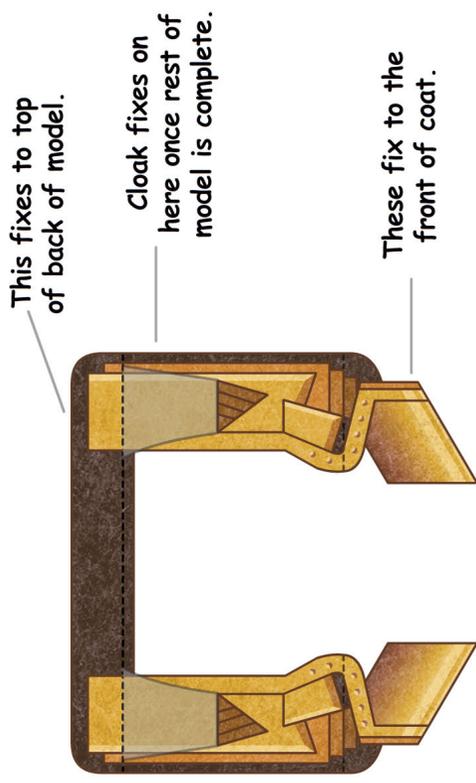

Jacket folds around body then these fix to the front of the top of Lokis body.

A Stick the tabs from the piece below here before adding the jacket to the model.

### Shoulder Armour.

Add this, and then the cape, once everything else on the model has been completed.

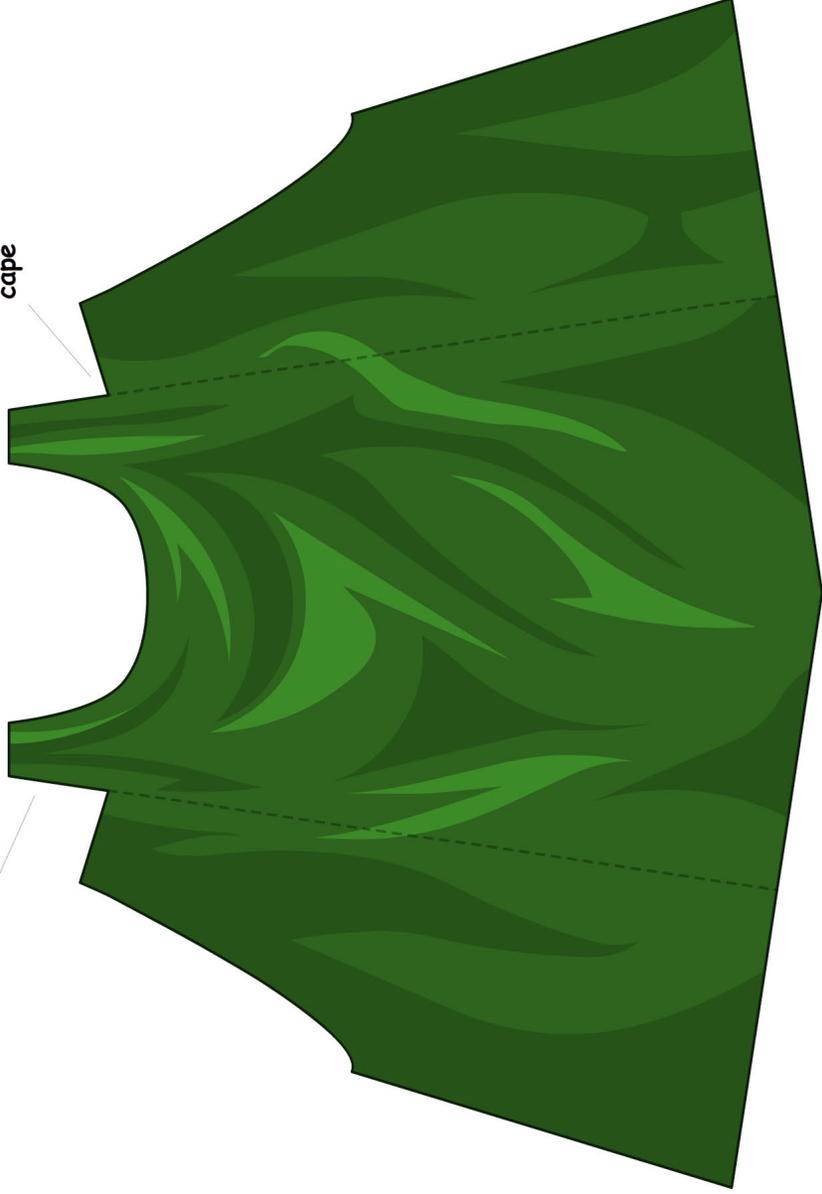

### Front collars

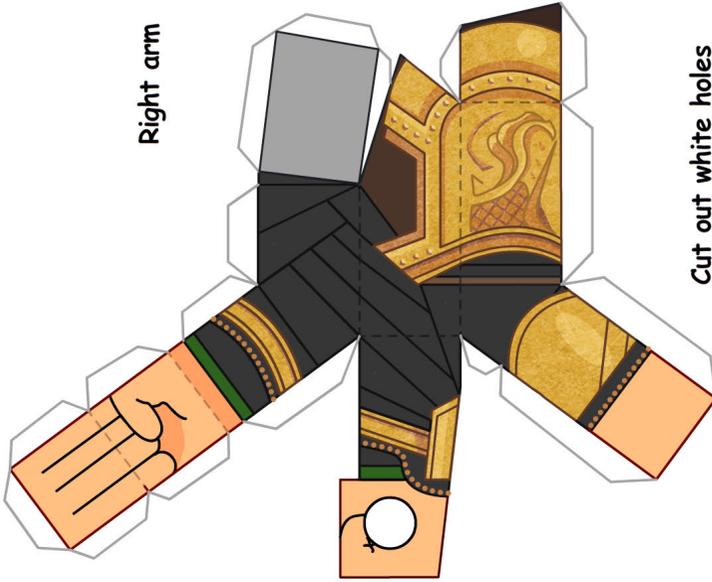

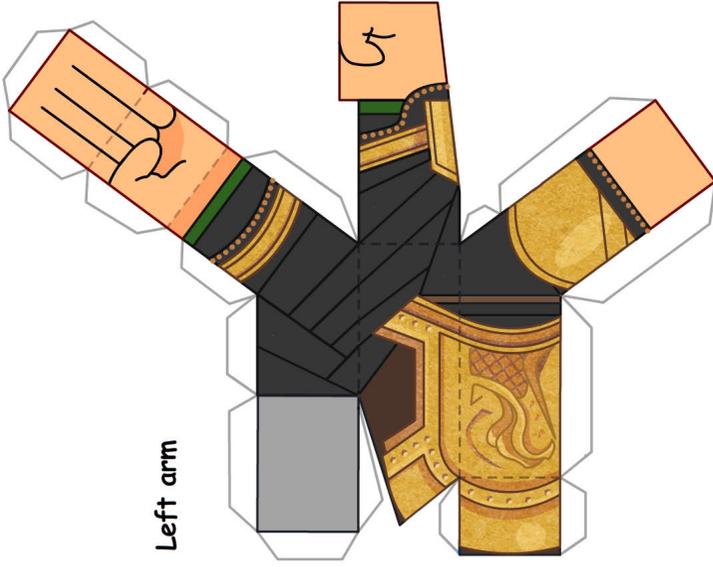

The back of these tabs sticks to the inside of the fronts of jacket. See image on cover to get an idea of how they should look.

Front tabs

Stick on to Shoulder Armour

Sides fold over flat  
to make inside of  
cape

Cut out white holes  
before assembly

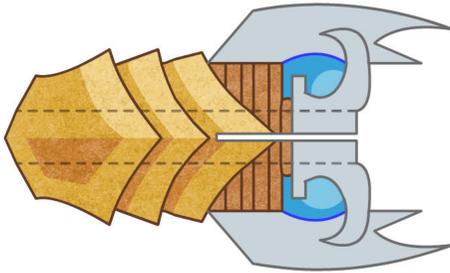

**Do not fold this tab.**  
Roll up whole staff and stick side over tab.

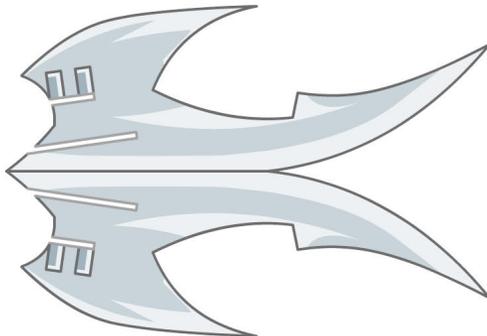

### Top of Staff.

Centre of this piece sticks over the greyed section on the main staff. The sides are then stuck on to the sides of the staff before the blades can be attached.

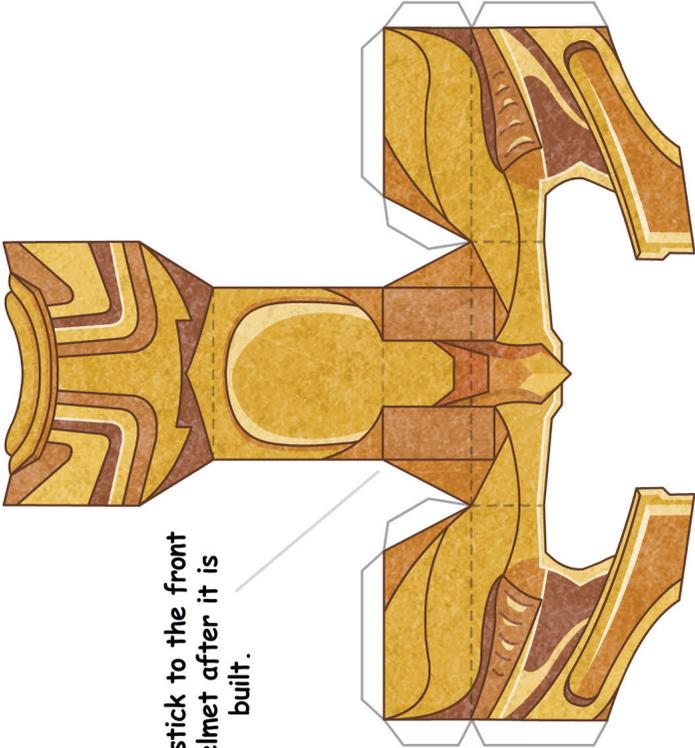

### Blade of Staff.

This piece folds straight in half and stuck down to make one double sided piece. Then cut the slits in the bottom so that it can slide of the slits in the main staff once the other piece is added..

## Loki's Staff

Once this is built, and the arms are complete, the staff is pushed through the holes provided in Loki's hand.

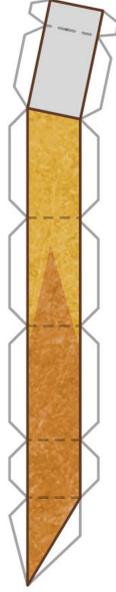

Horns stick to the front of helmet after it is built.

Curl sides of helmet in very slightly so that helmet forms to Loki's head.

## Horn / Antler things for helmet.

I would STRONGLY recommended building these in the following way:- Choose one side of an antler and stick all of the tabs down on to it along the edges. Then stick the inside of the antlers onto this side too. This should give one face of the antler with a complete border around it with a fold down top.. like a very strange shaped jewelry box with lid. THEN stick down the top of the antler to complete it. Like with the arms, if you try and stick both sides of the antlers to the edges at the same time as you go along it may get difficult.

Left Horn/Antler thing

Right Horn/Antler thing
